EDUCATION

North Carolina A&T State University

Greensboro, NC

Bachelor of Computer Science

August 2023 - May 2027

- GPA: 3.80
- Recipient of Zynga Scholarship & Mentorship (2024 Cohort)

Google Tech Exchange

Greensboro, NC

Technical Program

Jan 2025 - May 2025

- Selected as 1 of 1,500+ students nationwide for Google Tech Exchange, with advanced training in coding, system design, and professional development
- Completed coursework in Algorithms, System Design, and Software Engineering to strengthen problem-solving and interview skills

EXPERIENCE

CodePath / North Carolina A&T State University

August 2025 – December 2025

Tech Fellow

Greensboro, NC

- Provide technical mentorship and lead weekly lab sessions for a cohort of 150 students, supporting Python programming, debugging, and foundational computer science concepts
- Teach responsible use of generative AI tools in coding by emphasizing academic integrity, proper attribution, and critical evaluation of AI-generated output
- Support 42 lectures and lead 23 labs in coordination with instructors; foster engagement via EdStem discussions, deliver feedback, and promote inclusive, collaborative learning

Cisco

May 2025 – August 2025

Software Engineering Intern

Durham, NC

- Transformed a conceptual idea into a working prototype of an AI-powered chatbot designed to streamline Jira ticket management and integrate GitHub and Confluence documentation
- Designed and deployed scalable AWS infrastructure using auto-scaling EC2 groups, load balancers, security groups, and routing configurations to support the chatbot's performance and security needs
- Collaborated with engineers and fellow intern, then presented the fully functional prototype and infrastructure design to senior leadership, projecting a 15% reduction in documentation search time and faster ticket resolution

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HCL, C#, SQL

Frameworks & Tools: Unity, AWS, Google Cloud, Streamlit, Git/GitHub

PROJECTS

EcoWatch Environmental Dashboard | React, Node.js, OpenWeatherMap API

December 2025

- Built a responsive React dashboard with a custom vertical AQI bar graph, instant °F/°C switching, and dynamic weather-based backgrounds.
- Engineered a Node.js serverless proxy to aggregate multi-endpoint API data and deliver clearer user guidance and error handling for location searches.

Playlist DNA – Spotify Visualization App | Python, Streamlit, Spotipy, OpenAI API

October 2025

- Developed and deployed a Streamlit web app analyzing 100+ Spotify playlists, visualizing genre, artist, and popularity trends with interactive Altair charts.
- Integrated GPT-4o-mini to generate detailed playlist “vibe summaries,” optimizing caching and export pipelines for approximately 40% faster load times on Streamlit Cloud.

I Declare War – Unity Card Game | C#, Unity

February 2025 - May 2025

- Developed a Unity recreation of the card game “I Declare War,” implementing the full game loop, CPU-based gameplay, card flipping animations, and war resolution mechanics with tie-break recursion
- Collaborated on UI layout, visual feedback design, and bug testing, integrating features into a structured Unity project with GitHub for version control
